- There is a patty of butter which weighs *'w'* grams. If you cut off 100 grams from it, you will have '$w - 100$' grams left.
- If you start with a number *'y'* and then double it, you can write it as '$2y$' (you know, '$2y$' means 2 multiplied by y).

2.4.1 Converting Algebraic statements to Verbal statements

A few examples are given in the following table.

Sl. No	Algebraic statement	Verbal statement
1.	$m + 14$	14 more than *'m'*
2.	$x - 6$	*'x'* is reduced by 6
3.	$3y$ (or) $3 \times y$	product of 3 and *'y'*
4.	$5 \div z$ (or) $\frac{5}{z}$	5 divided by *'z'*
5.	$2p - 5$	5 less to 2 times *'p'*

Likewise, verbal statements can be converted to algebraic statements as follows.

TRY THESE

Sl. No	Algebraic statement	Verbal statement
1.	$a + 5$	
2.	$6z - 1$	
3.	$12y$	
4.	$\frac{x}{6}$	

2.4.2 Converting Verbal statements to Algebraic Statements

A few examples are given in the following table.

Sl. No	Verbal statement	Algebraic statement
1.	*'x'* is increased by 21	$x + 21$
2.	7 is taken away from *'a'*	$a - 7$
3.	Twice *'p'*	$2p$
4.	10 divided by *'m'*	$10 \div m$
5.	The product of 7 and *'y'* is divided by 2	$7y \div 2$
