4.3.8 Very special angles

- Here you find $\overrightarrow{AC}$ is exactly on $\overrightarrow{AB}$; then the angle is 0°. It is called the Zero angle.

- If 'C' is exactly on the opposite side 'B', with vertex 'A' in the middle. Then the angle is 180°. It is called the Straight angle.

4.3.9 Special pairs of angles

Two angles are complementary to each other if they add upto 90° [See Fig. 4.28(i)]

Two angles are supplementary to each other if they add upto 180° [See Fig. 4.28(ii)]

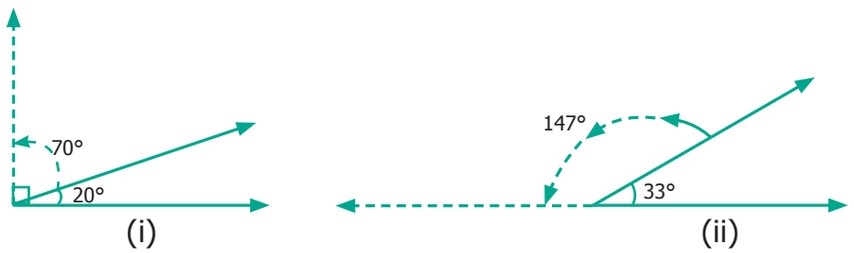

Fig. 4.28

In the above figures, 20° and 70° are complementary angles and 147° and 33° are supplementary angles. But 35° and 75° are neither complementary nor supplementary.

Exercise 4.2

1. Use any number of the given dots to make different angles.

1) An Acute Angle . . . . 3) A Right Angle	2) An Obtuse Angle . . . . 4) A Straight Angle . . . .
