14. In an apartment consisting of 108 floors, two lifts A & B starting from the ground floor, stop at every 3rd and 5th floors respectively. On which floors, will both of them stop together?

15. The product of 2 two digit numbers is 300 and their HCF is 5. What are the numbers?

16. Find whether the number 564872 is divisible by 88.
(use of the test of divisibility rule for 8 and 11 will help!)

17. Wilson, Mathan and Guna can complete one round of a circular track in 10, 15 and 20 minutes respectively. If they start together at 7 a.m from the starting point, at what time will they meet together again at the starting point?

DO YOU KNOW?

Two numbers are said to be ***amicable numbers*** if the sum of the factors of one number (except the number itself) gives the other number.

The numbers **220** and **284** are amicable, since the sum of the factors of **220** (except **220**) i.e., $1+2+4+5+10+11+20+22+44+55+110 = \mathbf{284}$ and the sum of the factors of **284** (except **284**) i.e., $1+2+4+71+142 = \mathbf{220}$.

Check whether **1184** and **1210** are amicable numbers.

Summary

- A natural number greater than 1, having only two factors namely 1 and the number itself, is called a *prime number*.
- A natural number having more than two factors is called a *composite number*.
- A pair of prime numbers whose difference is 2 is called as *twin primes*.
- Every composite number can be expressed as a product of prime numbers in a *unique way*.
- The *Highest Common Factor* of any two non-zero whole numbers is the largest common factor of both the numbers.
- The *Least Common Multiple* of any two non-zero whole numbers is the smallest common multiple of both the numbers.
- Two numbers having 1 as their only common factor are said to be *co-primes* or *relatively prime*.
- The product of two given numbers is equal to the product of their HCF and LCM.
