Try this

1. Complete the following table:

Metric Unit Table (Hierarchy of Units)						
For Length						
Kilometre (km)	Hectometre (hm)	Decametre (dam)	Metre (m)	Decimetre (dm)	Centimetre (cm)	Millimetre (mm)
For Weight						
			Gram			
For Volume						
			Litre			

2. Determine which metric unit you would use to express the following :

i. The length of your middle finger.

ii. The weight of an elephant.

iii. The weight of the ring.

iv. The weight of the tablet.

v. The length of the safety pin.

vi. The height of the building.

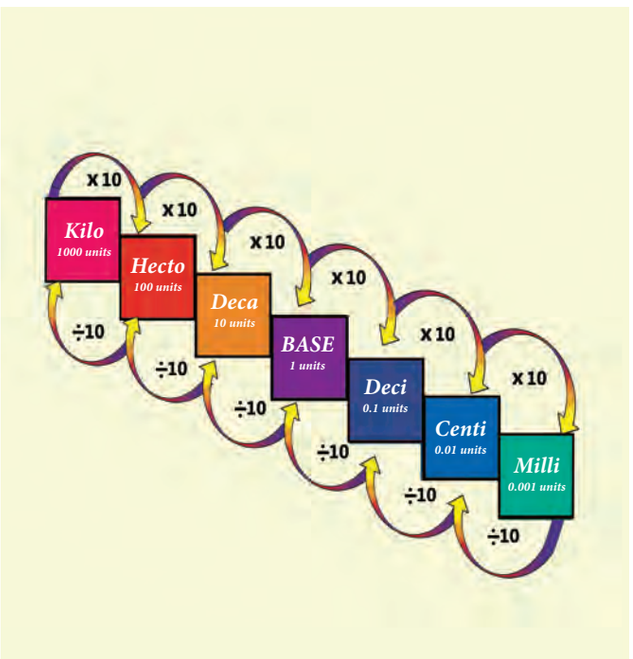

vii. The length of the sea shore in tamilnadu.

viii. The volume of cup of coffee.

ix. The capacity of water in the tank.

2.3 Conversions within the Metric System

All units of length in the metric system are defined in terms of the metre. A prefix is added to indicate the decimal place value position of the measurements. Similarly the units of weight and volume are defined in terms of gram and litre respectively. Let us observe the conversion chart.

- When we move from higher unit to lower unit, multiply the given measure by the powers of 10's.
- When we move from lower unit to higher unit, divide the given measure by the powers of 10's.
