Example 10: A child needs 100 g of vegetables per day. How many kg of vegetables will be needed for a school of strength 90.

Solution :

Total strength of the school = 90

Weight of vegetables for each child per day = 100 g

Total weight of vegetables for 90 children per day = 90 x 100 g

= 9000 g

= 9 kg.

Example 11: A bag contains 81 kg of sugar. If the shopkeeper fill up these into small packets of 750 g. each, then how many packets can be made from 81 kg of sugar?

Solution :

Quantity of sugar in the bag = 81 kg

Quantity of sugar filled in each packet = 750 g

Number of packets required = 81 kg ÷ 750 g

= 81x1000 g ÷ 750 g

= 81000 g ÷ 750 g

= 108

$$\begin{array}{r|l} & 108 \\ \hline 750 & 81000 \\ & 750 \\ \hline & 6000 \\ & 6000 \\ \hline & 0 \end{array}$$

Think

1. Five kilograms of compost is needed for a coconut tree for every six months. How many kilograms of compost is needed for 50 such coconut trees for one and half years.?
2. a. Is it correct: 4 m + 3 cm = 7 m
   b. Can we add the following?
   i) 6 l + 7 kg, ii) 3 m + 5 l iii) 400 ml + 300 g

Exercise 2.1

1. Fill in the blanks

(i) 250 ml + ½ l = ... l

(ii) 150 kg 200 g + 55 kg 750 g = ... kg ..... g

(iii) 20 l – 1 l 500 ml = ... l ..... ml

(iv) 450 ml x 5 = ... l ..... ml

(v) 50 kg ÷ 100 g = ...

2. True or False

(i) Pugazhenthi ate 100 g of nuts which is equal to 0.1 kg.

(ii) Meena bought 250 ml of buttermilk which is equal to 2.5 l.

(iii) Karkuzhali's bag 1 kg 250 g and Poongkodi's bag 2 kg 750 g. The total weight of their bags 4 kg.

(iv) Vanmathi bought 4 books each weighing 500 g. Total weight of 4 books is 2 kg.

(v) Gayathri bought 1 kg of birthday cake. She shared 450 g with her friends. The weight of cake remaining is 650 g.
