Try these

1. Check whether the Tree diagrams are equal or not

i)

ii)

2. Check whether the following algebraic expressions are equal or not by using Tree diagrams

i) $(x-y)+z$ and $x-(y+z)$

ii) $(p \times q) \times r$ and $p \times (q \times r)$

iii) $a-(b-c)$ and $(a-b)-c$

Consider the numerical expression 9 – 4. which means 4 is to be subtracted from 9. 9 – 4 can be represented as – 9 4 (so far we have come across with operation in between the operands)

Suppose the expression is 9 – 4 × 2. This can be represented as × – 9 4 2 gives the meaning of

Step 1: × 9 – 4 2

Step 2: (9 – 4) × 2

Take the expression + × – 9 4 2 5

Step 1: + × 9 – 4 2 5

Step 2: + (9 – 4) × 2 5

Step 3: [(9 – 4) × 2] + 5

This is reading an expression from “left to right”. Similarly, we can read expressions from “right to left” also

9 4 2 5 + × – can be read as "right to left" expression which gives the meaning of

9 4 2 5 + × – => (9–4)2 5 + ×

=> (9–4) × 2 5 +

=> [(9–4) × 2] + 5

Hence an expression can be read as “left to right” or “right to left” giving the same answer which is similar to name 4 as Naangu (நான்கு), Four, Nalagu (నాలుగు) and Char(**चार**), all of them representing the collection of four objects. Similarly the numerical expression

[(9 – 4) × 8] ÷ [(8 + 2) × 3] can be written as ÷ × – 9 4 8 × + 8 2 3 (left to right) or 8 9 4 – × 3 8 2 + × ÷ (right to left).

Try these: 1) × – + 9 7 8 2

2) ÷ × + 2 3 8 5
