Recap

I Fractions

On Anbu's birthday function, his father, mother and uncle have bought one cake each of equal size. At the time of cutting a cake, two friends were present for the celebration. He divided the cake into 2 equal pieces and gave the pieces to them. After some time, three of his friends arrived. He took another cake and divided it into 3 equal pieces and gave the pieces to them. Still he has one more cake at home. Anbu wanted to share it among his four family members. Third cake is divided into 4 equal pieces and given to them.

Following table shows how Anbu divided the cake equally according to the number of persons.

Division of Cake	Number of persons shared	Each one's share
		 $\frac{1}{2}$ or **one half** of the cake
		 $\frac{1}{3}$ or **one third** of the cake
		 $\frac{1}{4}$ or **one fourth** of the cake
