3. Write the fraction of shaded part in the following.

i) 

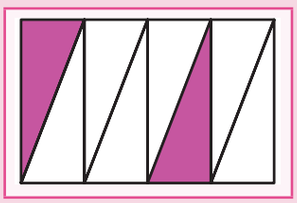

ii) 

iii) 

4. Write the fraction that represents the dots in the triangle.

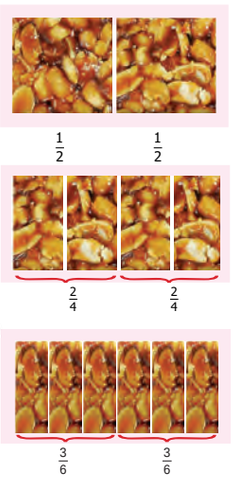

5. Find the fractions of the shaded and unshaded portions in the following.

II Equivalent Fractions

Murali has one peanut bar. He wants to share it equally with Rani. So he divided it into two equal pieces, each one has got 1 piece out of 2, which is half of the peanut bar. They both decided to have half of their share in the morning break and another half in the evening break. Now the total number of pieces becomes 4. Each one has 2 pieces out of 4. That is $\frac{2}{4}$ which is nothing but half of the peanut bar. Look at the figures. In both the type of sharing, they got only the same half of the peanut bar. Therefore, $\frac{1}{2} = \frac{2}{4}$. Hence, $\frac{2}{4}$ is ***equivalent to*** $\frac{1}{2}$.

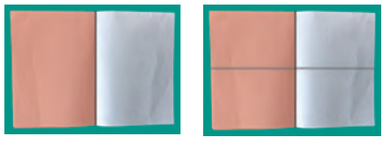

If the peanut bar had been divided into 6 equal pieces, each one would have got $\frac{3}{6}$. What about each one's share if it is divided into 8 equal pieces? $\frac{4}{8}$ We can observe that $\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$. How do we get these equivalent fractions of $\frac{1}{2}$?

$$\frac{1}{2} \times \frac{2}{2} = \frac{2}{4} \qquad \frac{1}{2} \times \frac{3}{3} = \frac{3}{6}$$

Hence, to get equivalent fractions of the given fraction, the numerator and denominator are to be multiplied by the same number.

Activity

Take a rectangular paper. Fold it into two equal parts. Shade one part, write the fraction. Again fold it into two halves. Write the fraction for the shaded part. Continue this process 5 times and write the fraction of the shaded part. Establish the equivalent fractions of $\frac{1}{2}$ in the folded paper to your friends.
