Example 22 A rod of length 6m is cut into small rods of length $1\frac{1}{2}\,m$ each. How many small rods can be cut?

Solution

The number of small rods $= 6 \div 1\frac{1}{2}$

$= 6 \div \frac{3}{2}$

$= 6 \times \frac{2}{3}$ (reciprocal of $\frac{3}{2}$ is $\frac{2}{3}$)

$= 4$ rods

Try these

i) Find the value of $5 \div 2\frac{1}{2}$.

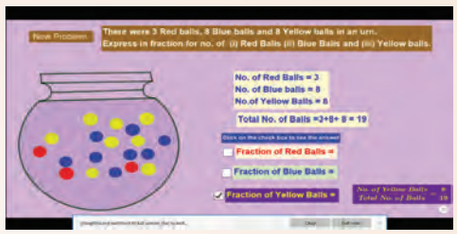

ii) Simplify: $1\frac{1}{2} \div \frac{1}{2}$

iii) Divide $8\frac{1}{2}$ by $4\frac{1}{4}$.

Expected Outcome

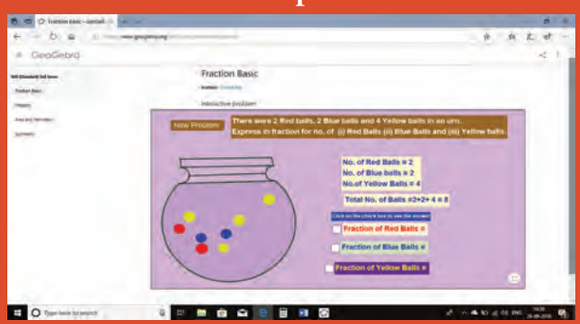

Step 1

Open the Browser by typing the URL Link given below (or) Scan the QR Code. GeoGebra work sheet named "Fraction Basic" will open. Click on New Problem and solve the problem.

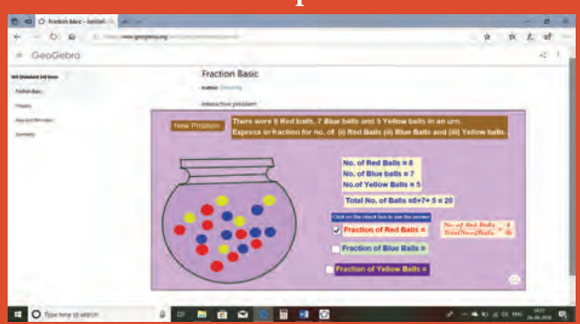

Step 2

Click the check boxes on right hand side bottom to check respective answers

Step1

Step2

Browse in the link:

Fraction Basic: https://ggbm.at/jafpsnjb or Scan the QR Code.
