CHAPTER 3

# PERIMETER AND AREA

E7BH2B

## Learning Objectives

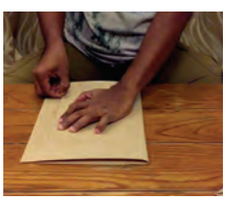

- To understand the concept of perimeter and area of closed shapes.
- To calculate the perimeter and area of square, rectangle, right angled triangle and their combined shapes.
- To understand the usage of units appropriately for area and perimeter.

## 3.1 Introduction

We come across many situations in our day to day life which deal with shapes, their boundaries and surfaces. For example,

- A fence built around a land.
- Frame of a photograph.
- Calculating the surface of the wall to know the quantity of the paint required.
- Wrapping the textbooks and notebooks with brown sheets.
- Calculating the number of tiles to be laid on the floor.

Some situations need to be handled tactfully and efficiently for the following reasons.

- Using the optimum space to build a dining hall, kitchen, bedroom etc., in constructing a house in the available land and planning of materials required.
- Arranging the things like cot, television, cup-board, table etc., in the proper place within the available space at home.
- Reducing the expenses in all the above activities.

In this context, learning of perimeter and area will be of great importance.
