Try these

i) Draw a shape with perimeter 16 cm in a dot sheet.
ii) What is the perimeter of a rectangle if the length is twice its breadth?
iii) What would be the perimeter of a square if its side is reduced to half?
iv) What is the perimeter of a triangle if all sides are equal in length?

Activity

Choose any five items like Table, A4 sheet, Note-book., etc in the classroom. Guess the approximate length of each side by observation and write down the estimated perimeter of the item. Then, measure by using ruler and record the actual perimeter and find the difference in the following table (to the nearest cm).

Item	Estimated Perimeter	Actual Perimeter	Difference

Example 4 Find the length of the rectangular black board whose perimeter is 6 m and the breadth is 1 m.

Solution

Perimeter of the black board, P= 6 m
Breadth of the black board, b=1 m
length, l =?

$2(l + b) = 6$
$2(l + 1) = 6$
$l + 1 = \frac{6}{2}$
$= 3$
$l = 3 - 1$
$= 2\ m$

The length of the black board is 2 m.

Example 5 Find the side of a square shaped postal stamp of perimeter 8 cm.

Solution

Perimeter of the square, P= 8 cm

$4 \times S = 8$
$S = \frac{8}{4}$
$= 2\ cm$

The side of the stamp is 2 cm.
