8. Draw the following :

i) A figure which has reflection symmetry but no rotational symmetry.

ii) A figure which has rotational symmetry but no reflection symmetry.

iii) A figure which has both reflection and rotational symmetry.

9. Find the line of symmetry and the order of rotational symmetry of the given regular polygons and complete the following table and answer the questions given below.

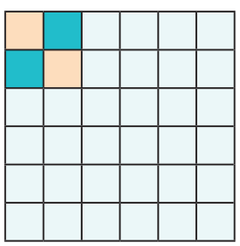

Shape	Equilateral triangle 	Square 	Regular pentagon 	Regular hexagon 	Regular octagon 
Number of lines of symmetry					
Order of rotational symmetry					

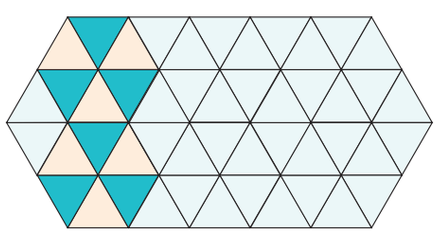

i) A regular polygon of 10 sides will have _____ lines of symmetry.

ii) If a regular polygon has 10 lines of symmetry, then its order of rotational symmetry is _____

iii) A regular polygon of 'n' sides has _____ lines of symmetry and the order of rotational symmetry is _____.

10. Colour the boxes in such a way that it posseses translation symmetry.

i) 

ii) 

Summary

- The line that divides any figure into two equal halves such that each half exactly coincides with the other is known as the **line of symmetry** or **axis of symmetry.**
- A shape has **reflection symmetry** if it has a **line of symmetry**.
- An object is said to have a **rotational symmetry** if it looks the same after being rotated about its centre through an angle less than 360°.
- The total number of times a figure coincides with itself in one complete rotation is called the **order of rotational symmetry.**
- **Translation symmetry** occurs when an object slides to a new position. The sliding movement involves neither rotation nor reflection.
