❖ Blowing air is used to turn the blades of wind mills.

The wind mills are used to draw water by running pumps, run flour mills and to generate electricity.

Points to Remember

❖ Air is every where around us.

❖ Our earth is surrounded by a huge envelope of air called the atmosphere.

❖ The process of burning of a substance in the presence of oxygen and releasing a large amount of light and heat is called combustion.

❖ Priestley helped us in understanding the presence of oxygen in air that is produced by plants during photosynthesis which can be used by animals for respiration.

❖ Ingenhousz experiment helped us to know the role of sunlight in evolving Oxygen during photosynthesis.

❖ Air contains 78% Nitrogen, 21% Oxygen, 1% of carbon-di-oxide, water vapour, Noble gases, and dust particles.

❖ Composition of air changes slightly from place to place and also from season to season.

❖ In plants,

$$\text{Carbon-di-oxide + water} \xrightarrow[\text{Chlorophyll}]{\text{Sunlight}} \text{Food + Oxygen}$$

❖ In animals,

$$\text{Food + Oxygen} \longrightarrow \text{Carbon-di-oxide + water + Energy}$$

❖ Aquatic plants and animals use oxygen dissolved in water for breathing.

❖ Ozone layer, present in the atmosphere helps in preventing harmful radiations hitting the earth directly.
