Circulatory System

A5T8FK

Superior vena cava

Aorta

Heart
pumps blood to the body

Pulmonary artery
carries blood from the right ventricle to the lungs

Pulmonary vein
carries blood from the lungs to the left atrium

Capillaries
are very narrow tubes not shown in this diagram, they connect the ends of all arteries to veins; they deliver and pick up gases, nutrients, and waste products

Arteries
shown in red they carry blood from the heart to all parts of the body; all arteries (except the pulmonary arteries) carry oxygenated, red blood

Veins
shown in blue, they carry blood from all parts of the body back to the heart; all veins (except the pulmonary veins) carry blood that is depleted of oxygen and therefore bluish in colour

Activity 6: Place the middle and index fingers of your right hand on the inner side of your left wrist. Can you feel a throbbing movement. Why do you feel the throbbing? This throbbing is called the **pulse** and it is due to the blood flowing in the arteries. Count the number of pulse in one minute.

How many pulse beats could you count in one minute? The number of beats per minute is called the **Pulse rate**. A resting person usually has a pulse rate between 72 to 80 beats per minute.

Find other places in your body where you can feel the pulse. Record your own pulse beats and your classmates as beats per minute; Compare the values.
