Evaluation

A6KVKI

I. Choose the appropriate answer

1. Circulatory system transports these throughout the body

   a. Oxygen b. Nutrient

   c. Hormones d. All of these

2. Main organ of respiration in human body is

   a. Stomach b. Spleen
   c. Heart d. Lungs

3. Breakdown of food into smaller molecules in our body is known as

   a. Muscle contraction

   b. Respiration

   c. Digestion

   d. Excretion

II. Fill in the blanks

1. A group of organs together make up an _____ system
2. The part of the skeleton that protects the brain is _____
3. The process by which the body removes waste is _____
4. The _____ is the largest sense organ in our body
5. The endocrine glands produce chemical substances called _____

III. True or False. If False, give the correct statement

1. Blood is produced in the bone marrow.
2. All the waste products of the body are excreted through the circulatory system.
3. The other name of food pipe is alimentary canal.
4. Thin tube like structures which are the component of circulatory system are called blood vessels.
5. The brain, the spinal cord and nerves form the nervous system.

IV. Mach the following

1. Ear	-	Cardiac muscle
2. Skeletal System	-	Flat muscle
3. Diaphragm	-	Sound
4. Heart	-	Air sacs
5. Lungs	-	Protection of internal organs

V. Arrange in Correct sequence

1. Stomach → Large intestine → Oesophagus → Pharynx → Mouth → Small Intestine →Rectum → Anus
2. Urethra → Ureter → Urinary Bladder → Kidney

VI. Analogy

1. Arteries : Carry blood from the heart:: _____ :carry blood to the heart.
2. Lungs: Respiratory system:: _____: Circulatory system.
3. Enzymes: Digestive glands:: _____: Endocrine glands
