Activity 4: Take a small quantity of cotton swap. Hold it between your thumb and fore finger. Now, gently start pulling out the cotton, while continuously twisting the Fibres.

Are you able to make a yarn?

The process of making yarn from Fibres is called **Spinning.**

5.5 Timber yielding plants

The wood needed for the construction of buildings and making of furniture are obtained from certain plants. We use wood for these purposes due to their features like durability, stylish finishing and resistance to temperature changes.

Timber

All commercial timbers are classified into two classes as Hardwoods and softwoods based essentially on their structure.

Hardwoods

Hardwoods are angiosperms (flowering plants), the largest group of land plants. High-quality furniture, desks, flooring, and wooden construction are being made only using hardwood. eg. Teak, Jackfruit.

Softwoods

Softwoods come from gymnosperm (non-flowering plants) trees. Certain angiosperms also yield softwood.

Softwoods have a wide range of applications such as making plywood, wooden boxes, medium-density Fibreboard (MDF) and paper making. eg: katampu, Pine.

The finely cut wooden boards from the wood are layered one above the other to make plywood. This is a kind of composite wood.

5.6 Ornamental plants

Plants which are grown for aesthetic reasons are called as **ornamental plants**. Producing flowers from floral plant is the important section of horticulture. eg: Jasmine, Rose, Chrysanthemum, Carnation, Jerbara etc.

To decorate houses, gardens and parks we are planting shrubs such as Hibiscus, Grape, Jasmine and Crotons and climbers like Mullai, Allamanda and Bougainvillea, trees such as Golden shower tree, Mandarai, Delonix tree (Flame of the forest) etc.
