Activity :

Take a ball and a thin iron wire. Pierce the ball with the wire from one end to the other end through the middle. Remove the wire. Draw circles around the points. Name the northern most point as North Pole and the southern most point as South Pole. The angle of a circle is 360°. Mark points on the circle at an interval of 15° using a protractor. Then draw lines joining these points on the top and bottom of the ball. The lines that you have drawn are lines of longitudes.

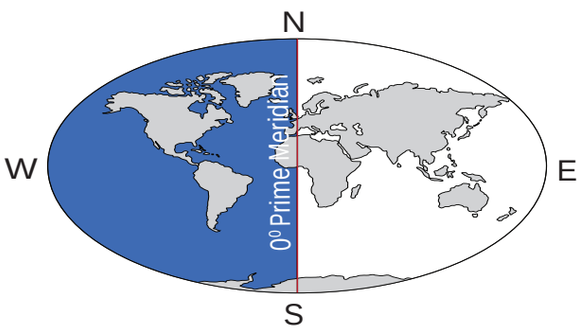

Eastern Hemisphere

The part of the Earth between the 0° line of longitude and the 180° East line of longitude is known as the **Eastern Hemisphere.**

Western Hemisphere

The part of the Earth from 0° line of longitude to 180° West line of longitude is called as **Western Hemisphere.**

Activity

Based on the longitudinal extent, in which hemisphere is our country located? Look at the globe and answer.

Significant Lines of Longitude

Greenwich Meridian

The Royal Astronomical Observatory is located at Greenwich near London in England. According to the International Meridian Conference held in 1884 in
